

Activity 3 Internet Research on Climate Change

Description

Students will continue working on the classroom “Climate Change in Canada” map. Using information from a given website, students will work individually or in pairs to research different pieces of information that they will compile and add to the classroom map.

Planning Notes

1. Book access to the computer lab in the school.
2. Decide if the students will be researching their assigned website individually or in pairs.

Teaching/Learning Strategies

1. Hold class in the computer lab. Review how to skim and scan information.
2. Assign one of the websites below to each student or pair of students. Each student/pair will make point-form notes, highlighting the key impacts of climate change and any actions that have taken place or are in progress.
3. Students record their findings on index cards and add to the “Climate Change in Canada” map.

Resources

Wherever possible, materials from this Resources section have been archived on the Ontario EcoSchools website: www.yorku.ca/ecoschl
